NOTIFICATION OF ELECTION

(PCT Rule 61.2)

_		
	٠.	

Commissioner **US** Department of Commerce United States Patent and Trademark Office, PCT 2011 South Clark Place Room

CP2/5C24

Arlington, VA 22202 FTATS-UNIS D'AMERIQUE

01 May 2001 (01.05.01)	in its capacity as elected Office		
International application No. PCT/GB00/03072	Applicant's or agent's file reference IPD/P2755/WOD		
International filing date (day/month/year) 09 August 2000 (09.08.00)	Priority date (day/month/year) 06 September 1999 (06.09.99)		
Applicant TREEN, Andrew, Shaun et al			

1.	The designated Office is hereby notified of its election made:
	X in the demand filed with the International Preliminary Examining Authority on:
	01 February 2001 (01.02.01)
	in a notice effecting later election filed with the International Bureau on:
2.	The election X was
	was not
	made before the expiration of 19 months from the priority date or, where Rule 32 applies, within the time limit under Rule 32.2(b).

The International Bureau of WIPO 34, chemin des Colombettes 1211 Geneva 20, Switzerland

Re It m I

Basis of the report

This report is based on amended claims 1-18, sent with letter of 26.10.01, and corresponding to page numbered as 8 and 9. This numbering is however not compatible with the originally filed documents in which page 8 corresponds to the last page of the description. The page numbers corresponding to the amended claims should be 9 and 10.

Re Item V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1 Prior art

Reference is made to the following documents:

D1: GB-A-2 229 003 (NITTO KOHKI CO LTD) 12 September 1990 (1990-09-12)

D2: US-A-3 703 879 (C.K. HUTHSING, JR.) 28 November 1972 (1972-11-28)

D3: GB-A-2 069 139 (HISANORI WARIHASHI) 19 August 1981 (1981-08-19)

D4: DE 296 16 337 U (T.-T. HUANG) 7 November 1996 (1996-11-07)

2 Article 33 (1) and (2) PCT (Novelty)

- 2.1 The document D1, which is considered to represent the most relevant prior art, discloses (cf. abstract; pg. 6, I. 20 pg. 7, I. 6; pg. 7, I. 15 pg 9, I. 20; pg. 10, I. 2 pg. 12, I. 10 and Figs. 2 and 3) a pressure indicator comprising a flat light shielding member 18 consisting on a bag 19, the bag forming a compartment delimited by the sides of the bag (display and indicator diaphragms), filled with a liquid, wherein, in use, a change in pressure applied to a first side of the bag causes a relative movement between the two sides of the bag which is detectable on or through the second side of the bag.
- 2.2 The subject matter of claim 1 differs from that D1 in that the indicator diaphragm bears a configuration or pattern suitable to allow detection of the relative movement between both diaphragms by the configuration or patter abutting or

becoming visible through the display diaphragm when, in use, such a movement occurs.

- 2.3 The subject matter of claim 1 is therefore new.
- 2.4 Claims 2-16 and 18 are dependent on claim 1 and as such also meet the requirements of the PCT with respect to novelty.
- 2.5 Claim 17 concerns to the method of indicating pressure with the apparatus of claims 10-16 and therefore it also meets the requirements of the PCT with respect to novelty.
- 3 Article 33 (1) and (3) PCT (Inventive Step)
- 3.1 The present application does not meet the requirements of Article 33 (1) and (3) PCT, because the subject-matter of claims 1-18 does not involve an inventive step (Rule 65(1),(2)) PCT. The reasons are as follows:
- 3.2 Taking into account the above paragraphs 2.1 and 2.2, the problem to be solved by claim 1 of the present application may therefore be regarded as providing alternative means for detecting the relative movement between the both diaphragms.
- 3.3 The solution to this problem consisting in the provision of a configuration or pattern forming part of the indicator diaphragm has already been proposed in documents D2 (cf. abstract; col. 2, l. 47-65; col. 6, l. 16-36 and 53-61 and Figs 6-9) and D3 (cf. abstract; pg. 1, l. 111-126; pg. 2, l. 41-65 and Figs. 1 and 5a-7e). Both documents disclose pressure indicators including a diaphragm (34 in D2 and 26 in D3), equivalent to the indicator diaphragm of the present application and bearing a pattern consisting on symbols projecting from its surface towards the display surface (71 and 16 in D2 and D3 respectively) when a difference in pressure is applied.
- 3.4 The above mentioned feature is described in these documents as providing the same advantages as in the present application. The skilled person would

therefore regard it as a normal option to include this feature in the apparatus described in document D1 in order to solve the problem posed. The subject matter of claim 1 does therefore not involve an inventive step.

- 3.5 The pressure indicator of D1 also includes means to amplify the relative movement between the diaphragms forming the bag consisting on an article 12 having a first surface 16 and a second surface 14 having a larger cross-sectional area than the first surface and biased against a rigid structure 2 by spring 23, wherein the first surface is in fluid communication with one of the diaphragms and, in use, a change in pressure applied to the second surface 14, causes an amplified movement of the first surface 16. Furthermore the second surface (the display diaphragm) of the bag 19 of the device disclosed in D1 is transparent and the bag contains an opaque liquid.
 - The subject matter of dependent claims 2, 3, 5-9 is therefore also not inventive.
- 3.6 The additional features introduced by dependent claims 10, 11 and 13 are also disclosed in D2 and D3 where the mentioned patterns comprise at least two components with different visibility and consisting on symbols projecting from its surface towards the display surface. Consequently, these claims cannot be considered inventive either.
- 3.7 Concerning claims 16 and 18, the pressure indicators disclosed in documents D3 and D4 are inflatables, particularly a ball in the case of D4. Therefore the subject matter of these claims is also not inventive.
- 3.8 In claims 4, 12, 14 and 15 slight constructional changes in the device of claim 1 are defined which come within the scope of the customary practice followed by persons skilled in the art, especially as the advantages thus achieved can readily be foreseen. Consequently, the subject-matter of these claims also lacks an inventive step.
- 3.9 Finally, concerning independent method claim 17, it is directly followed from the above reasoning that the method of indicating pressure with such apparatus is also not inventive.

Articl 33 (1) and (4) PCT (Industrial Applicability) 4

The subject matter of claims 1-18 is susceptible of industrial application.

Re Item VII

Certain defects in the international application

- Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art 1 disclosed in the documents D1-D4 is not mentioned in the description, nor are these documents identified therein.
- The independent claims are not in the two-part form in accordance with Rule 2 6.3(b) PCT, which in the present case would be appropriate, with those features known in combination from the prior art (document D1) being placed in the preamble (Rule 6.3(b)(i) PCT) and with the remaining features being included in the characterising part (Rule 6.3(b)(ii) PCT).
- The features of the claims are not provided with reference signs placed in 3 parentheses (Rule 6.2(b) PCT).

Re Item VIII

Certain observations on the international application

Article 6 PCT (Clarity)

- The feature of "the relative movement between the two diaphragms being observable when the pattern or configuration abuts or becomes visible through the display diaphragm" in the apparatus claim 1 relate to a method of using the apparatus rather than clearly defining the apparatus in terms of its technical features. The intended limitations are therefore not clear from this claim, contrary to the requirements of Article 6 PCT.
- 2 Claim 3 do not meet the requirements of Article 6 PCT in that the matter for which protection is sought is not clearly defined. The claim attempts to define the subject-matter in terms of the result to be achieved which merely amounts to a

statement of the underlying problem. The technical features necessary for achieving this result should be added. In particular the following feature is concerned: "a change in pressure applied to the second surface causing an amplified movement of the first surface".

- 3 The terms "recognisable", "configuration or pattern" and "components" as used in claims 1 and 11-13 are vague and unclear and leave the reader in doubt as to the meaning of the technical features to which they refer, thereby rendering the definition of the subject-matter of said claims unclear.
- Dependent claim 18 refers back to the pressure indicator of "any preceding claim", however, claim 17 does not define any pressure indicator (Rule 6.4(c), PCT Guidelines IV-III-3.6).
